Package.**

Rainfall potential

Expected Impacts

- Slight Risk Tonight and on Tuesday! A Watch Could Be Possible.
- While severe probabilities currently remain low, the main threat with the strongest storms will be damaging winds.
- An isolated tornado is possible, particularly with any storms moving inland ahead of the main line.
- Rainfall amounts could be up to 2 inches across Southeast Alabama and the Florida Panhandle with lesser amounts near 1 inch along the Interstate 75 corridor in South Georgia.

Key Points

- Strong to severe storms will be possible early Tuesday Morning across the Florida Panhandle and adjacent coastal waters.
- These storms will spread inland across the Florida Big Bend, Southeast Alabama, and Southwest Georgia later in the morning and into the afternoon hours.
- Rain chances will diminish shortly after sunset as the cold front moves across the region.
